1. What is the purpose of the <header> and <footer> elements in HTML5?

Expected Answer: <header> represents the introductory content or navigation links for a section or page, while <footer> contains information like copyright, contact details, or links at the end of a section or page.

2. What is the <main> element used for in HTML5?

Expected Answer: The <main> element represents the primary content of a document. It excludes repeated content like headers, footers, and sidebars, helping screen readers focus on the main content.

3. What is the difference between <b> and tags in HTML5?

Expected Answer: <b> is used for stylistic bold text without semantic meaning, while indicates importance or urgency, with semantic meaning for accessibility.

4. What is the purpose of the <time> element in HTML5?

Expected Answer: The <time> element represents a specific point in time or duration. It can include attributes like datetime for machine-readable timestamps.

5. What is the <mark> element in HTML5?

Expected Answer: The <mark> element highlights text that is relevant or important, often used to indicate search results or key points in a document.

6. What are the new input types introduced in HTML5?

Expected Answer: HTML5 introduces input types like email, url, number, range, date, color, and tel, which provide better validation and user experience.

7. What is the <progress> element in HTML5?

Expected Answer: The <progress> element represents the completion progress of a task, such as a file upload. It includes attributes like value and max to indicate progress.

8. What is the <output> element in HTML5?

Expected Answer: The <output> element displays the result of a calculation or user action, often used in conjunction with JavaScript for dynamic content updates.

9. What is the difference between localStorage and sessionStorage in HTML5?

Expected Answer: localStorage stores data with no expiration, persisting even after the browser is closed, while sessionStorage stores data for the duration of the session and is cleared when the browser is closed.

10. What is the <details> element in HTML5?

Expected Answer: The <details> element creates a collapsible section of content. It works with the <summary> element to provide a summary or title for the collapsible content.

11. What is the <nav> element in HTML5?

Expected Answer: The <nav> element represents a section of navigation links, such as menus or tables of contents, helping users navigate the website.

12. What is the <figure> and <figcaption> element in HTML5?

Expected Answer: The <figure> element is used to group media content like images or diagrams, and <figcaption> provides a caption or description for the content.

13. What is the purpose of the placeholder attribute in HTML5?

Expected Answer: The placeholder attribute provides a hint or example text inside an input field, helping users understand what to enter.

14. What is the <template> element in HTML5?

Expected Answer: The <template> element holds HTML content that is not rendered immediately but can be cloned and inserted into the DOM using JavaScript.

15. What is the <datalist> element in HTML5?

Expected Answer: The <datalist> element provides a list of predefined options for an input field, allowing users to select from suggestions while still being able to enter custom values.
